Eurofins Biopharma Product Testing

About Autima

Autima was founded in 2011 as an expert provider of Environmental Monitoring Solutions for the monitoring of critical fridges, freezers, and incubators across the Healthcare, Life Sciences, University & Research Institutes, and Warehousing & Distribution industries in Australia, New Zealand, and Southeast Asia.

Autima's Environmental Monitoring Systems ensure that clients comply with regulatory standards set out by the TGA, NATA and ISO to name a few.

Autima is committed to providing its clients with peace of mind by enabling them to continuously monitor their sensitive products and equipment from anywhere, anytime. Research Institutes and Warehousing & Distribution.

About Eurofins BioPharma Product Testing

Eurofins BioPharma's Sydney laboratory offers world-class analytical and consulting services across a range of sectors including Microbiology, Chemistry, Virology and Toxicology to name a few.

The BioPharma Product Testing division of Eurofins is the world's most extensive network of harmonised Biopharmaceutical GMP product testing laboratories, offering complete laboratory services to the world's largest pharmaceutical, biopharmaceutical, and medical device companies.

Why Eurofins BioPharma Product Testing Partnered with Autima

"Storage stability data is essential for establishing the efficacy and safety of products over time. Regarding temperature and humidity within our laboratories, there can be no margin of error. All steps of the storage process are tightly controlled and accurately documented," says Ger Mc Grath, QA Microbiologist at Eurofins BioPharma Product Testing, Sydney.

To ensure secure storage, Eurofins partnered with Autima to install between 90 and 100 temperature probes in different divisions throughout Eurofins BioPharma Product Testing laboratories. Since partnering with Autima, Eurofins BioPharma can continually ensure the preservation of client samples as well as ongoing product stability.

In the event of any temperature or humidity deviations, the Eurofins team will be automatically notified via Email, SMS and Smartphone App and can take corrective actions to rectify any potential temperature or humidity excursions.

Autima's After Sales Service

Beyond the initial implementation of Autima's Environmental Monitoring System, the team is dedicated to ensuring that all users are fully trained on the ColdCloud portal to ensure that the EMS is utilised to its fullest extent.

"The sales specialists at Autima do their level best to suit our needs and are always available should we have questions or problems. They frequently check up to ensure all monitoring systems operate and handle any problems or challenges we face instantly," says Ger Mc Grath.

Conclusion

Environmental Monitoring Systems have never been more critical than today. The BioPharma industry has seen an increased emphasis on compliance and quality assurance. Ensuring that critical pharmaceuticals are being stored at the correct temperatures is paramount.

It is necessary for companies such as Autima to collaborate with scientists and quality assurance teams across the BioPharma industry to establish bespoke Environmental Monitoring Systems for each client and their specific requirements.

These Environmental Monitoring Systems are required to provide continual oversight of assets such as Fridges, Freezers, Incubators and Cryogenics. Autima's cloud-based system does this for clients across the BioPharma sector – both within Australia and Southeast Asia.
